hi yes i was able to read the eprom directly and grab vin and immo info.

So it transferred all that.

Now if your having communication problems check wiring and you can check the ecu by connecting the scanner on table with power and ground and can lines

Message Body:

Please confirm that you were able to communicate, and transfer VIN. engine/transmission system data from the old to the new ECU. I am troubleshooting a communication problem with the ECU, I would like to confirm that you were successful in communicating/cloning the ECU. thank you.
